

## **Day 8 - Images, Colors, and Tables in Bootstrap**

Date: 07 July 2025

The Day 8 session of the Web Development Training explored the use of images, colors, and tables within the Bootstrap framework. The focus was on understanding how Bootstrap's predefined classes make it easy to style and align visual elements consistently across web pages.

Key topics covered included:

- Adding and styling responsive images using Bootstrap classes such as .img-fluid and .rounded.
- Applying contextual color classes for text and backgrounds.
- Using Bootstrap's table classes to create clean, responsive, and well-formatted data tables.
- Understanding table styling options such as striped, bordered, hover, and dark tables.
- Combining multiple Bootstrap components for improved content presentation.

The practical exercises included creating a sample webpage that displayed an image gallery and data tables with various color themes. Participants gained experience in building visually appealing and structured layouts that enhance the user experience through effective use of color and media.
