Day 2 - HTML Layout Elements and Techniques

Date: 25 June 2025

The Day 2 session of the Web Development Training was focused on exploring HTML layout elements and various techniques used to structure a webpage effectively. The participants learned about semantic elements that improve the clarity and accessibility of HTML code.

Key topics covered included:
• Understanding the purpose of semantic tags such as <header>, <nav>, <main>, <section>, <article>, and <footer>.
• Using <div> and <span> for non-semantic grouping and inline styling.
• Organizing content for better readability and maintainability.
• Applying HTML5 best practices for clean and efficient structure.

The session also included a practical exercise where learners created a basic webpage layout using a combination of semantic and non-semantic elements. This provided hands-on experience in building the foundation for responsive design and CSS styling in upcoming sessions.
