Day 7 - Revision of Previous Concepts Using Cards

Date: 04 July 2025

The Day 7 session of the Web Development Training was dedicated to revising previously learned concepts through a practical activity involving the creation of Bootstrap cards. This hands-on revision helped participants reinforce their understanding of HTML, CSS, and Bootstrap layout principles.

Key topics reviewed included:
• HTML structure and semantic elements.
• CSS selectors, classes, and inline vs. external styling.
• The Bootstrap grid system and responsive design techniques.
• Creating and styling Bootstrap card components.
• Using utility classes for spacing, alignment, and colors.

In the exercise, learners designed multiple cards to display different pieces of content such as text, images, and buttons. This activity strengthened their grasp of component-based layout design and prepared them for more advanced Bootstrap features in upcoming sessions.
